Education

University of California, Santa Barbara (UCSB) | *Bachelor of Science in Statistics and Data Science* |

Graduated: June 2026

- **Coursework:** Data Science Principles, Probability and Statistics, Stochastic Processes, SAS Programming, Data Analysis and Visualization, Linear Algebra, Applied Psychology

Technical Skills

- **Programming Languages:** Python, SQL, C++, Java, R, Shell Scripting
- **Developer Tools & Environment:** Docker, Git, VS Code, Linux/VM Environments, AWS (S3, CloudWatch basics)
- **Libraries & Frameworks:** Pandas, NumPy, Scikit-Learn, Pydantic, REST APIs

Internship & Project Experience

TalentScreen | *AI Engineering Project Associate (Contract)* | **Mar 2026 – Present**

- Assisted the team in writing Python scripts using `Unstructured.io` to parse and clean unstructured text documents for search tools
- Helped containerize basic Python applications using Docker to support standard staging setups.
- Configured basic AWS CloudWatch logging and metrics dashboards to monitor application activity.

SonicWall | *QA Test Engineering Intern* | **Jun 2025 – Aug 2025**

- Supported software release testing by automating routine endpoint protection test cases
- Executed SSH-based scripts across Windows Virtual Machines (VMs) to assist with environment configuration
- Ran automated benchmark test files to check endpoint detection and logging responses.

Swift Security | *Software/MLOps Intern* | **Jun 2024 – Sep 2024**

- Wrote automated browser interaction scripts using Selenium for user data flow testing.
- Used Docker to help run user interaction test scripts in isolated container environments.
- Collected and formatted execution log data for basic operational analysis.

Projects

Stateful AI Claims Routing Framework (LangGraph) | *Python, LangGraph, Docker* | [GitHub](#)

- Built a state machine routing script in Python to test structured execution nodes and error-handling steps.
- Containerized the project using Docker for simple local deployment.

Resilient Multi-Turn Agentic Orchestrator | *Python, OpenAI SDK, Pydantic* | [GitHub](#)

- Created a multi-turn Python script executing API calls with Pydantic schema validation to manage input limits
